SUMMARY

Cloud Operations System Engineer with hands-on AWS experience across infrastructure automation, incident response, and 24/7 production support for a 500+ host fleet. Built Infrastructure as Code (IaC) using AWS CDK/CloudFormation and Python/Bash automation for CI/CD pipelines; resolved 50+ Sev-2 incidents during the AWS EUSC region launch. MSc in Cyber Security.

TECHNICAL SKILLS

Cloud & IaC: AWS (EC2, S3, Lambda, CloudFormation, CDK, CloudWatch, IAM, DynamoDB, Redshift, DocumentDB, Neptune, ElastiCache), Infrastructure as Code (IaC), CI/CD Pipelines

Operations: Incident Response, Root Cause Analysis, On-Call Support, Monitoring & Alerting, Automation, Linux Fleet Administration, SLA/SLO Management

Networking & Security: Fortinet Firewalls/Routers, Network Security, Encryption, Web Application Security, Wireshark, SolarWinds, Vulnerability Assessment, OWASP ZAP, Penetration Testing

Languages & OS: Python, Java, C, MySQL, Data Structures, Linux, Windows

PROFESSIONAL EXPERIENCE

Amazon Web Services – Managed Operations System Engineer May 2026 – Present
European Sovereign Cloud (EUSC) Dublin, Ireland

- Own Infrastructure as Code (IaC) using AWS CDK and CloudFormation for a fleet of 500+ hosts, delivering repeatable deployments through CI/CD pipelines.
- Build Python and Bash automation tooling that replaced manual operational runbooks, cutting per-task execution time across a 15-person ops team.
- Drive root cause analysis for production incidents across 4 AWS services, authoring post-incident reviews that fed directly into reliability improvements.
- Collaborate with cross-functional engineering teams to scope and deliver infrastructure changes, improving SLO adherence for regional production systems.

Amazon Web Services – Managed Operations Support Engineer Apr 2025 – Apr 2026
European Sovereign Cloud (EUSC) Dublin, Ireland

- Provided 24/7 on-call production support for DynamoDB, Redshift, and internal platforms serving the AWS EUSC region, maintaining high-availability SLAs.
- Resolved 50+ Sev-2 incidents during the EUSC region buildout, driving rapid diagnosis and coordinating cross-team response to minimise customer impact.
- Supported large-scale Linux fleet operations across 500+ hosts, deploying features and enabling critical production service launches in a new AWS region.
- Wrote Python and Bash scripts to automate recurring operational tasks, reducing manual toil and improving consistency across the team's daily workflows.

Network Elements Ltd. Oct 2024 – Apr 2025
IT and Network Engineer Ireland

- Managed rack/stack, hardware replacement, server troubleshooting, fibre cable structuring/patching, and iDRAC remote management across data centre environments.
- Administered Fortinet firewalls, routers, and switches; monitored network traffic with Wireshark and SolarWinds to detect and remediate threats proactively.
- Ran vulnerability assessments and patch cycles using OWASP ZAP; installed and supported AV systems for conference rooms.

Smart Bridge 2020
Machine Learning Intern India

- Built a toxic comment classification system using Python and IBM Watson, analysing large datasets and implementing machine learning algorithms for social network content moderation.

PROJECTS

Detecting Malware Using Machine Learning | *SVM, Random Forest, XGBoost, LDA* 2023 – 2024

- ML-based malware detection system analysing network traffic patterns; comparative model analysis and parameter optimisation.

Spoken Language Identification | *CNN, RNN, ResNet50, Inception V3* 2022

- Performance evaluation of deep learning models for spoken language identification.

Detecting Parkinson's Disease Using Voice | *Python, ML* 2021

- Predictive model for Parkinson's disease onset using 30 voice attributes.

Sketch-Based Image Retrieval Evaluation | *Python* 2021 – 2023

- Evaluated performance of four algorithms for sketch-based image retrieval.

Toxic Remarks Classification | *Python, IBM Watson* 2019

- ML-based system for processing comments and detecting toxic content in social networks.

EDUCATION

National College of Ireland Dublin, Ireland
MSc Cyber Security – Network Security, Cryptography, Malware Analysis, Incident Response, Cloud Security 2023 – 2024
Sreenidhi Institute of Science and Technology (JNTU Hyderabad) Hyderabad, India
BTech Information Technology 2018 – 2022
